

“EVO” VARNISHING

Thanks to the extensive research carried out by our product-development department, we have implemented the **EVO varnishing**, which is an evolution of the “raw effect” concept, already present in the Unikolegno collection, a flagship for Unikolegno.it.

Such **EVOLUTION** gives the finished floor the feeling of a completely natural product, as if it was deprived of the varnish coating. Moreover, the visual and tactile feeling is that of freshly cut wood, smoothed and brushed, which, like any other, gives the impression of touching a raw wood: this is how the **EVO finish** was born.

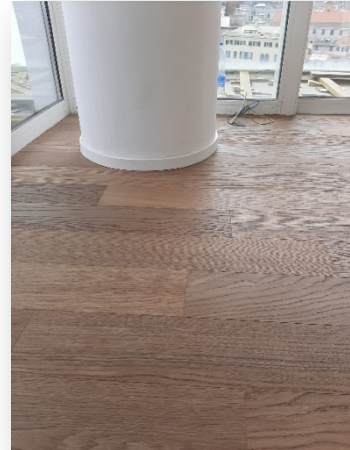

It consists of a double water-based, ultra-resistant finish and deprived of the typical 'ambrants' of natural varnishes, which tend to "veil" and "heat up" the wooden surface to which they are applied.

The appearance of the parquet remains with the colour tone of the untreated wood; the double dose of water-based varnish is absorbed, leaving the surface slightly rippled and rough, with a 5-gloss opacity (the right balance between naturalness and practicality).

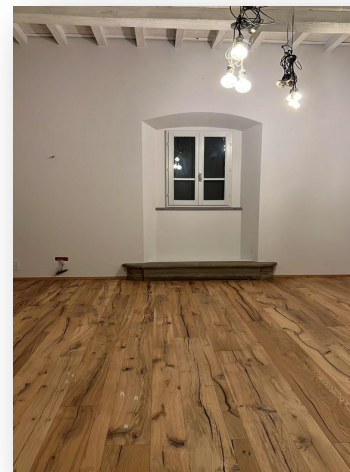

The typical transparency of **EVO**, applied on a large amount of the wood in the Unikolegno collection, allows the natural mutability of wood exposure to light, hence the floor will oxidize naturally.

The tests we carried out on the finish yielded the following results:

- Very good resistance against chemicals.
- High resistance to footsteps (100 laps TABER for the hardness of the varnish).
- Fire reaction class Cfl-s1.
(on 2-layer oak with 15 mm thickness)
